TEAM 21 · PS5 · FINANCE / HR · SRM AGENTIC AI HACKATHON

ClaimEase

An AI agent that files expense claims, checks them against policy, and flags the ones that break a rule.

Member	Role
Sugavasi Devanath	Team Lead · Database (repo, Supabase, Vercel)
Thondamalla Sarwan	AI / Agent (tools, system prompt)
Amirisetty Rohith	Backend / API (API route, Zod)
Gonuguntla Lalitya	Frontend (pages, components)

THE PROBLEM

Claims break the policy, and finance checks every one by hand

- **Who:** an employee who spends money on work (Meera Nair, grade L2).
- Employees don't know the limit for their grade, so they submit claims that break policy.
- Finance spends hours checking each claim against the policy table.
- Old claims (over 60 days) slip through and need to be chased back.

In our seed data

36

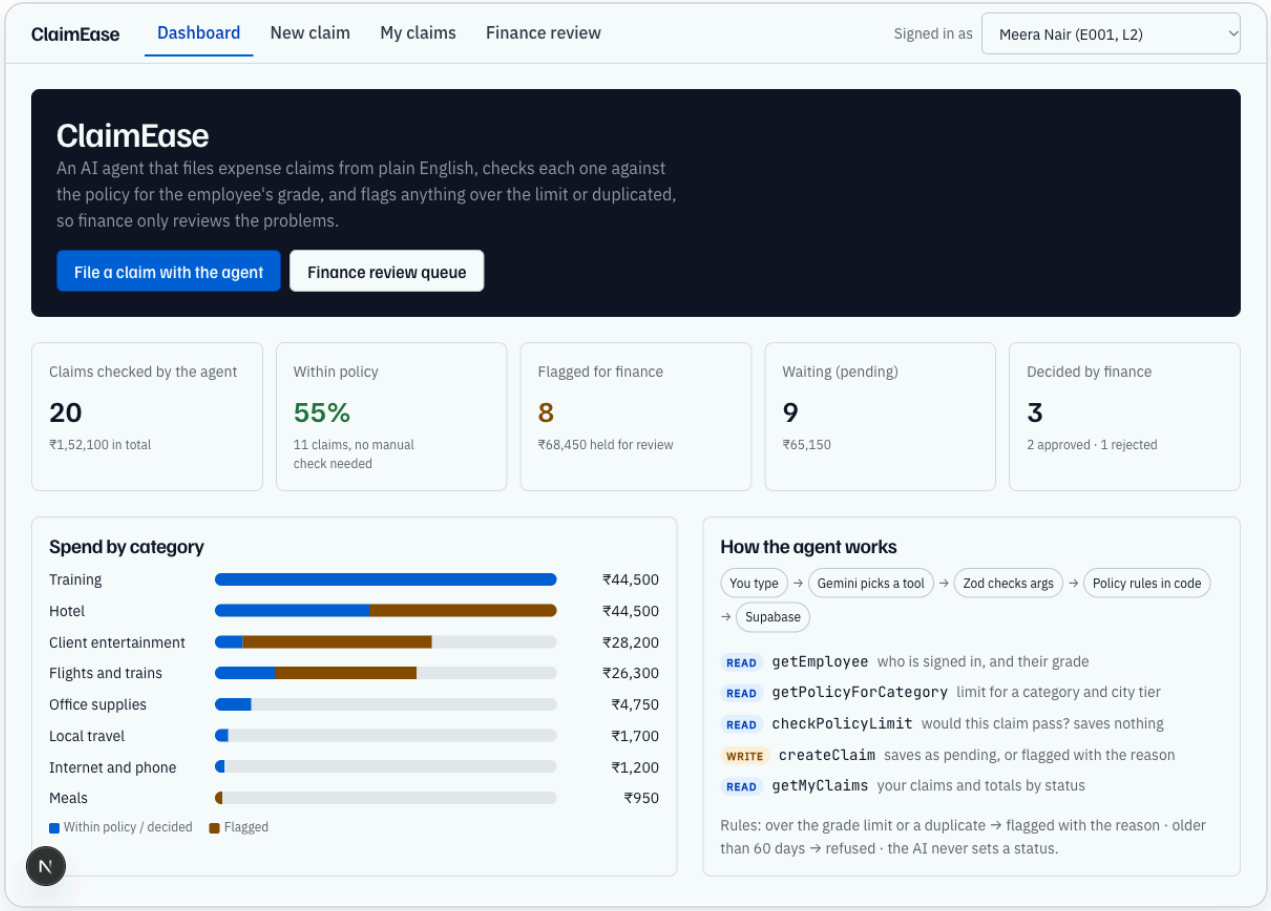

policy limits to remember (9 categories × 4 grades)

5 of 14

existing claims broke a limit and needed a manual check

OUR SOLUTION · ONE SYSTEM, THREE USERS

Not a chatbot: an agent that files, checks and routes claims

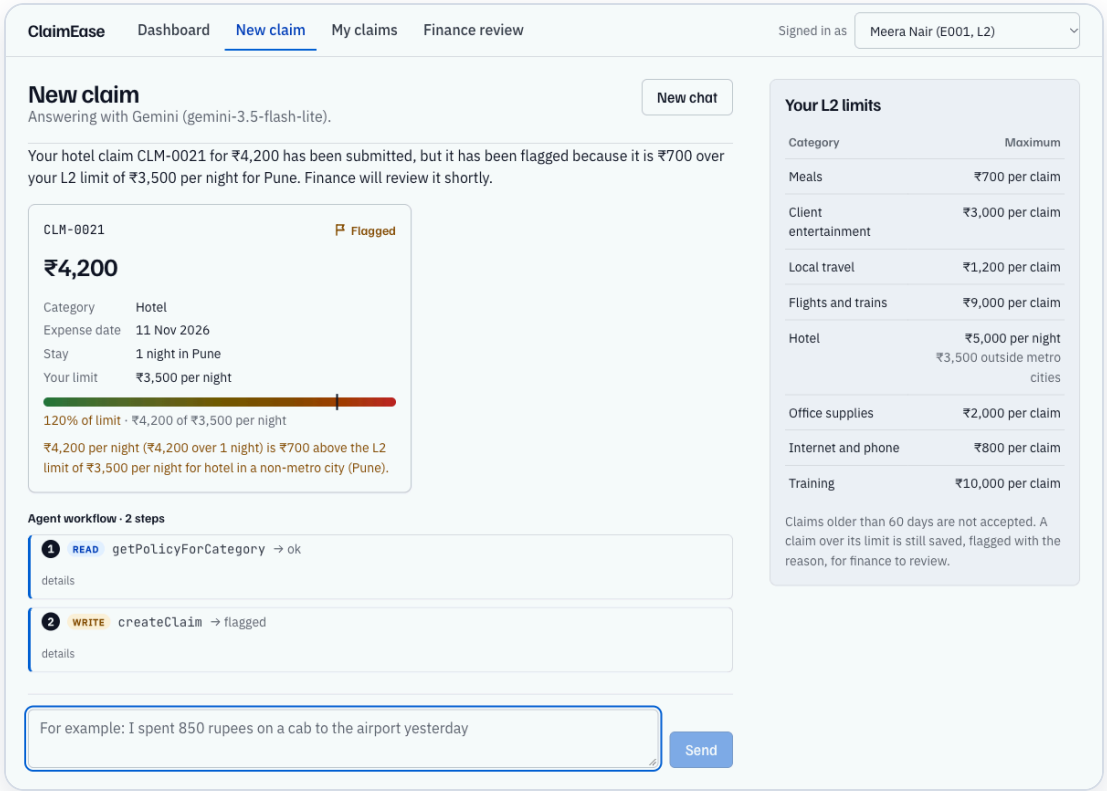

Dashboard, live from Supabase: claims checked, policy rate, money held, spend by category.

User	What ClaimEase does
Employee	Describe the expense; the agent picks the category, checks the limit and files it
Finance	Sees only the flagged queue; approves or rejects with a note
Manager	Dashboard: spend, policy breaks, money held

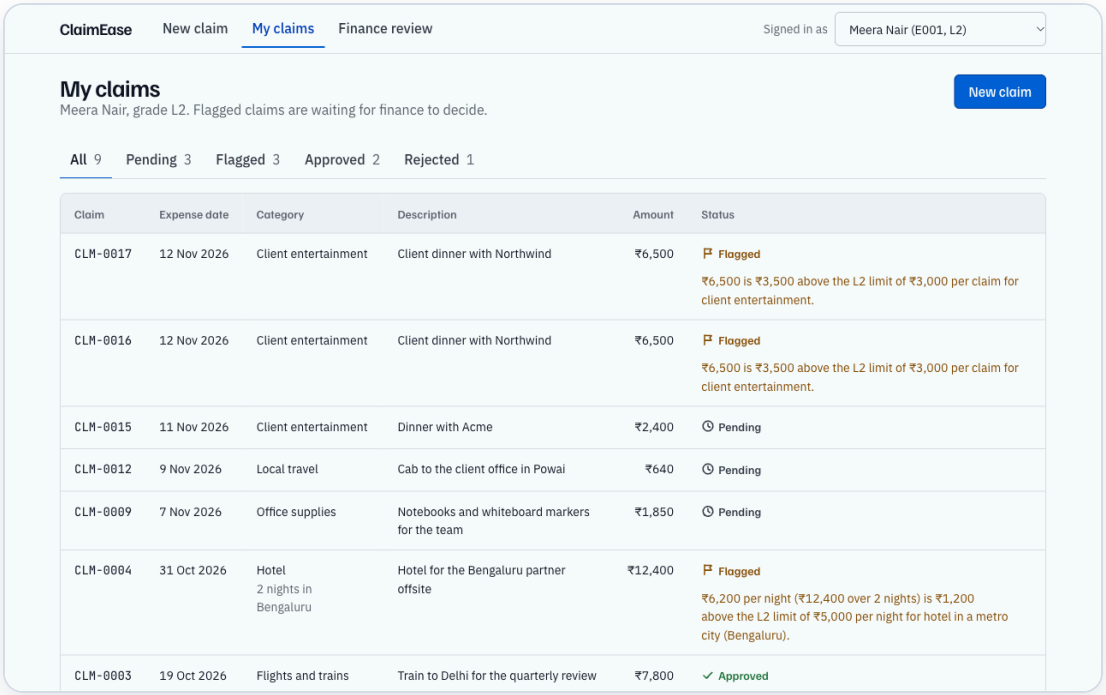

4 screens · 5 tools · 7 rules in code · Gemini + fallback agent

LIVE DEMO · THE AGENT AT WORK

Describe the expense. The agent does the rest.

"₹4,200 hotel in Pune, 1 night" → agent runs **READ** getPolicyForCategory, then **WRITE** createClaim → **flagged**, 120% of the ₹3,500 non-metro limit. Every step is shown.

My claims: the new claim appears straight from Supabase, with its status and reason.

HOW THE AGENT WORKS

Tool	Type
getEmployee	Read
getPolicyForCategory	Read
checkPolicyLimit	Read
createClaim	**Write**
getMyClaims	Read

Rules checked in code, before saving

- Over the grade limit → saved as **flagged** with the reason
- Older than 60 days or future date → refused
- Same amount, category and date already claimed → flagged as **possible duplicate**
- Hotel limit per night, by metro / other city
- User id never a tool argument

Stack: Next.js · TypeScript · Supabase · Gemini function calling · Zod · Vercel

RESULTS AND LINKS

Working end to end on the live link

- ✓ ₹2,400 client dinner → saved as **pending**
- ✓ "Hotel in Mumbai?" → ₹5,000 per night, nothing saved
- ✓ ₹6,500 dinner → **flagged**, ₹3,500 over limit
- ✓ Same dinner sent twice → flagged as **possible duplicate**
- ✗ Lunch from 1 Sep → **refused**, older than 60 days
- ✗ "File it for E004" → **refused**, only your own claims

Next: receipt upload with OCR, real sign-in, monthly spend summary for finance.
